Phase 7 PROJECT DOCUMENTATION

STUDENT ENROLLMENT SYSTEM

Academic Year 2026-2027 • PAGE 1 of 3

DOCUMENT VERSION 7.0 • 2026-2027

This is written proof of our work.

PROJECT OVERVIEW

Purpose:

- Centralize enrollment processes into one unified platform
- Reduce manual paperwork & administrative workload
- Establish a single source of truth for student data
- Improve data accuracy, traceability, and reporting efficiency
- Enable streamlined enrollment for 2026-2027 academic year

KEY OBJECTIVES

Automation

Automate enrollment workflows and validation

Integration

Consolidate Student, Course, Faculty, and Enrollment data

Compliance

Enforce validation rules & data integrity

TECHNICAL DOCUMENTATION

Data Model Overview

Four custom objects built on Salesforce Platform to support the enrollment lifecycle.

Relationshops & Logic:

- **Master-Detail:** Enrollment__c → Student__c
- **Enrollment__c → Course__c** (roll-up summaries enabled)
- **Lookup: Course__c → Faculty__c** (associate course to instructor)
- **Automation:** Formulas, Validation Rules, Approval Processes

OBJECTS & FIELDS REFERENCE

Detailed schema for all custom objects

OBJECT	FIELD NAME	DATA TYPE	RELATIONSHIP / LOGIC
Student__c	Student ID • First Name • Last Name • Email • Grade Leveil • Enrollment Status • Parent Contact	Auto-number • Text(50) • Text(50) • Email • Picklist • Picklist • Phone	— *Standalone Object (Parent)*
Course__c	Course Code • Course Name • Credits • Instructor • Capacity • Semester	Text(10) • Text(80) • Number(2,0) • Lookup → Faculty__c • Number(3,0) • Picklist	
Enrollment__c	Enrollment No • Student • Course • Enrollment Date • Status • Grade • Completion	Auto-number • Master-Detail → Student__c • Master-__c Date • Picklist • Formula(Number) • Checkbox	Master-Detail to Student & Course
Faculty__c	Faculty ID • Name • Department • Email • Hire Date • Active		
	Auto-number • Text(60) • Picklist • Email • Date • Checkbox		— *Standalone Object (Parent)*

VALIDATION RULES:
Email required • Capacity > 0 • Enrollment Date ≤ TODAY()

FORMULAS EXAMPLE:
Grade = IF(Completion = TRUE, 100, 0)

ACCESS CONTROL:
Role-based visibility, Sharing Rules, Profile permissions

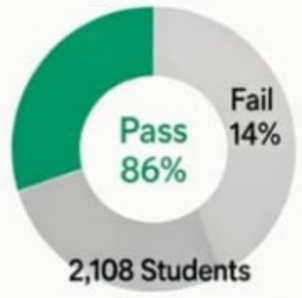

REPORTS & DASHBOARDS

Enrollment Trends

+12.5% YoY growth • 1,450 total as of Feb 2027

Grade Reports — Pass/Fail

Target: ≥85% Pass Rate ✓ Met

Course Capacity Dashboard

CS101	MATH210	ENG105
Intro to CS	Calculus	Writing
95/100 • 95% Filled	78/90 • 87% Filled	52/60 • 87% Filled

Total Seats: 250 • Filled: 225 • Available: 25 • 90% Capacity

USER MANUAL

Student Portal

- Login: Access via sso.university.edu > Use Student ID & Password
- Enroll: Courses > Browse Catalog > Select > Confirm Enrollment
- View Grades: Academics > Grades > View by Term

Faculty Guide — Grading

- Entering Grades: Classes > Roster > Gradebook > Input Grades > Submit for Review
- Deadlines: Submit within 5 business days of term end

Admin Guide — Setup & User Creation

- Setup: Admin Console > System Settings > Term Configuration
- User Creation: Users > New User > Assign Role (Student/Faculty/Admin) > Send Invite

DEPLOYMENT GUIDE

How we deployed from Sandbox to Production using Change Sets

1. VALITATE
Validate metadata & config in Sandbox

2. TEST
Run UAT • Data checks • QA sign-off

3. CHANGE SETS
Create & upload Change Set from Sandbox

4. DEPLOY
Deploy to Production • Monitor logs

Best Practice: Peer Review required before Deploy
- **Rollback Plan:** Restore via Backup Snapshot
- Deployment Window: Fri 6pm–9pm UTC

SECURITY MODEL OVERVIEW

Role-based security model built on Salesforce Platform — ensuring data privacy and access control for Student Course Enrollment

OWD: PRIVATE
Default = No Access

PROFILES: 3 ROLES
Admin • Faculty • Student

SHARING RULE: CRITERIA-BASED
Faculty access to assigned courses only

ROLE HIERARCHY

ADMIN — Full System Access • Manage All Records • Configure Security Manage Users

↓

FACULTY — Enrollments for Assigned Courses • View Student Records (Related to Course) • No System Config Access

↓

STUDENT — View Own Enrollment & Records • Read-Only No Edit/Delete Rights

Role Hierarchy: Admin > Faculty > Student — Access inherits downward with restrictions

PROFILE	CRUD PERMISSIONS	FIELD-LEVEL SECURITY (FLS)
SYSTEM ADMIN Standard	• Create ✓ • Read ✓ • Edit ✓ • Delete ✓ • Create — • Read ✓ • • Read ✓ • (Assigned Only) • • Edit ✓ (Assigned Only) • Delete —	All Fields: Editable ✓ • Manage FLS ✓ Grades/Evaluation: Editable ✓ Personal Info: Read-Only ✓

SECURITY CONFIGURATION

OWD SETTINGS — Student Course Enrollment

- **Default External Access: Private**
  Ensures students/faculty cannot view records they do not own
- Requires explicit sharing for cross-role access

SHARING RULE — FACULTY ACCESS

Rule Type: Criteria-Based Sharing
Criteria: Course_Instructor__c = $User.Id
Access Level: Read/Edit to matched records
Purpose: Faculty can view enrollments of their assigned courses only

SHARING RULE LOGIC FLOW

Faculty Record = Assigned Course = true? → Share Enrollment Records to Faculty (Read/Edit) = No Access

DETAILED SHARING RULES TABLE

OBJECT	OWD	SHARING RULE	BUSINESS JUSTIFICATION
Student Course Enrollment	Private	Faculty: Assigned Course Only (Read/Edit)	Faculty access limited to courses they instruct for academic integrity
Student Record	Private	Student: Owner Only (Read)	Students can view only their own profile and enrollment history
Course Catalog	Public Read Only	Faculty/Student: Read Only	Course details are visible to all for reference, no edits

KEY CONTROLS:

- ✓ CRUD Permissions enforced via Profile
- ✓ FLS controls field visibility & edit access
- ✓ Role Hierarchy ensures layered access control
